

RESUME WEBSITE ENHANCEMENT USING HTML, CSS, AND JAVASCRIPT

Name- Priyanshi Saini

Roll no – 25120731

Course – BBA DBE BATCH -2

◆ Project Overview

This project focused on enhancing a personal resume website using HTML, CSS, and JavaScript. The main objective was to improve the overall design, layout, and visual appeal of the website while applying core CSS concepts such as fonts, colors, spacing, positioning, and selectors. The project also aimed to create a clean and user-friendly interface that effectively presents personal and professional information.

◆ Improvements Made

Several improvements were made to transform the basic HTML resume into a visually appealing and structured website:

- Designed and added a **navigation bar using Flexbox**, allowing smooth and organized navigation between different sections of the website
 - Applied a **consistent color palette with soft gradients**, creating a modern and aesthetic look across the entire webpage
 - Integrated **Google Fonts (Poppins)** to enhance readability and give the website a clean, professional appearance
 - Structured the content into **separate sections (About, Skills, Projects, Contact)** for better clarity and user experience
 - Styled each section as a **card layout with rounded corners, shadows, and proper spacing**, making the content visually distinct and attractive
 - Improved alignment and spacing using **CSS properties such as margin, padding, and width**, ensuring proper layout structure
 - Used **CSS selectors (element, class, and ID selectors)** to organize styling efficiently and maintain clean code
 - Implemented **hover effects and transitions** on navigation links and buttons to enhance interactivity
 - Designed the skills section using **flexbox layout**, displaying skills in a structured and visually appealing manner
 - Added **JavaScript functionality** to create a simple interactive feature using a button click event
 - Ensured the overall website design is **minimal, responsive, and user-friendly**, improving both usability and aesthetics
-

◆ Technologies Used

The following technologies were used to build and enhance the website:

- **HTML** – for structuring the content of the website
- **CSS** – for styling, layout design, and visual improvements
- **JavaScript** – for adding basic interactivity

- **GitHub** – for hosting and managing the project

◆ **Learning Outcome**

Through this project, I gained a better understanding of how CSS plays a crucial role in improving the design and usability of a website. I learned how to apply styling techniques such as layout structuring, spacing, color selection, and typography to create a visually appealing interface. Additionally, I understood the importance of organizing code using selectors and enhancing user experience through interactivity.

◆ **Conclusion**

Overall, this project helped me develop practical skills in web development and design. It enhanced my confidence in creating structured and aesthetically pleasing websites while applying fundamental concepts of HTML, CSS, and JavaScript. The improvements made significantly upgraded the look and functionality of the original resume website.
